- Higher Dimentional Automata's languages are pomsets

Goals:

- Enumerate gps-posets
- Find a combinatorial proof of a conjecture

Motivations:

- Provide a better understanding of a specific class of posets
- Interesting for its use in concurrency theory
- Higher Dimentional Automata's languages are pomsets

Goals:

- Enumerate gps-posets
- Find a combinatorial proof of a conjecture
- Finish an ongoing work started few years ago

What is a Partially Ordered Set?

Definition

A partially ordered set (**poset**) is a set with a partial order relation. An order relation is a relation that is:

- Reflexive: $\forall x \in E, xRx$
- Transitive: $x, y, z \in E, xRy \land yRz \Longrightarrow xRz$
- Antisymmetric: $x, y \in E, xRy \land yRx \Longrightarrow x = y$

What is a Partially Ordered Set?

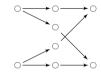

Figure: Example of a poset

What is a Partially Ordered Set?

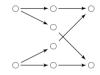

Figure: Example of a poset

 $\bullet_{\quad \bigcirc}$: represents an event

Figure: Example of a poset

- ullet $_{\odot}$: represents an event
- \bullet \longrightarrow : represents the order relation between the event on the left and the item on the right

What is an iposet?

Definition

A poset with interfaces (iposet) is a poset together with 2 injections:

$$[n] \stackrel{s}{\longrightarrow} P \stackrel{t}{\longleftarrow} [m], \qquad n, m \geqslant 0$$

What is an iposet?

Definition

A poset with interfaces (iposet) is a poset together with 2 injections:

$$[n] \stackrel{s}{\longrightarrow} P \stackrel{t}{\longleftarrow} [m], \qquad n, m \geqslant 0$$

such that the image of s[n] is minimal and the image of t[m] is maximal.

• s is a starting interface -

What is an iposet?

Definition

A poset with interfaces (iposet) is a poset together with 2 injections:

$$[n] \stackrel{s}{\longrightarrow} P \stackrel{t}{\longleftarrow} [m], \qquad n, m \geqslant 0$$

- s is a starting interface -
- t is a terminating interface -

Definition

A poset with interfaces (iposet) is a poset together with 2 injections:

$$[n] \stackrel{s}{\longrightarrow} P \stackrel{t}{\longleftarrow} [m], \qquad n, m \geqslant 0$$

- s is a starting interface -
- t is a terminating interface -
- *n* is an "unstarted" event -

Definition

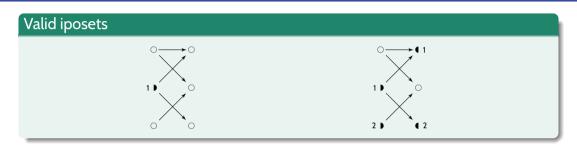

A poset with interfaces (iposet) is a poset together with 2 injections:

$$[n] \stackrel{s}{\longrightarrow} P \stackrel{t}{\longleftarrow} [m], \qquad n, m \geqslant 0$$

- s is a starting interface -
- t is a terminating interface -
- *n* is an "unstarted" event -
- m is an "unfinished" event -

Examples of iposets

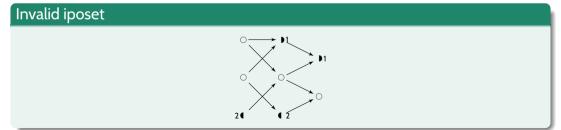

Examples of iposets

We can define some operations to classify them $(\triangleright, \otimes, ...)$.

We can define some operations to classify them (\triangleright , \otimes , ...). Here are some classes of posets:

We can define some operations to classify them ($\triangleright, \otimes, ...$). Here are some classes of posets:

• Series-Parallel posets (sp-posets)

We can define some operations to classify them (\triangleright , \otimes , ...). Here are some classes of posets:

- Series-Parallel posets (sp-posets)
- Gluing-Parallel posets (gp-posets)

We can define some operations to classify them (\triangleright , \otimes , ...). Here are some classes of posets:

- Series-Parallel posets (sp-posets)
- Gluing-Parallel posets (gp-posets)
- Gluing-Parallel-Symmetric posets (gps-posets)

Definition

The parallel composition $P \otimes Q$ is defined as the coproduct $P \sqcup Q$ as carrier set together with the order defined as:

$$(p,i) < (q,j) \iff i = j \land p <_i q, \qquad i,j \in \{1,2\}$$

Another way to consider this definition is the following: With:

$$[n_1] o (P) \leftarrow [m_1], [n_2] o (Q) \leftarrow [m_2]$$

 $P \otimes Q$ is defined by:

$$[n_1+n_2] \rightarrow [P \otimes Q] \leftarrow [m_1+m_2]$$

Examples of parallel compositions

Warning

The parallel composition is not commutative!

Examples of parallel compositions

Warning

The parallel composition is not commutative!

Case 1:

$$1) \otimes 1) \longrightarrow 0 =$$

$$2) \longrightarrow 0$$

Examples of parallel compositions

Warning

The parallel composition is not commutative!

Case 1:

$$1) \otimes 1) \longrightarrow 0 =$$

$$2) \longrightarrow 0$$

Case 2:

$$1 \longrightarrow 0 \otimes 1 \longrightarrow 0$$

$$2 \longrightarrow 0$$

Definition

The gluing composition $P \triangleright Q$ of two iposets

$$[n_1] \xrightarrow{s_1} (P, <_1) \xleftarrow{t_1} [m_1]$$

and

$$[n_2] \xrightarrow{s_2} (Q, <_2) \xleftarrow{t_2} [m_2]$$

is defined as:

$$P \triangleright Q = \begin{cases} (P \sqcup Q)/t_1(i) = s_2(i) \\ (<_1 \cup <_2 \cup (P / t_1[m]) \times (Q / s_2[m]))^+ \end{cases}$$

Examples of gluing compositions

Warning

The gluing composition is defined only if $m_1 = n_2$! The number of starting interfaces of P must be equal to the number of terminating interfaces of Q.

Examples of gluing compositions

Warning

The gluing composition is defined only if $m_1 = n_2$! The number of starting interfaces of P must be equal to the number of terminating interfaces of Q.

Valid gluing composition

$$\begin{pmatrix} \mathbf{1} & \mathbf{1} \\ \mathbf{0} \\ \mathbf{0} & \mathbf{1} \end{pmatrix} \triangleright \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{1} \end{pmatrix} = \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0}$$

Examples of gluing compositions

Warning

The gluing composition is defined only if $m_1 = n_2$! The number of starting interfaces of P must be equal to the number of terminating interfaces of Q.

Valid gluing composition

$$\begin{pmatrix} \mathbf{1} & \mathbf{b} \\ \mathbf{b} \\ \mathbf{0} & \mathbf{1} \end{pmatrix} \mathbf{b} \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{b} \\ \mathbf{1} \mathbf{b} & \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{b} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0} \end{pmatrix} = \begin{pmatrix} \mathbf{0} & \mathbf{0} \\ \mathbf{0$$

Invalid gluing composition

$$\begin{pmatrix} \mathbf{1} & \mathbf{1} \\ & \triangleright \\ & \bigcirc & \mathbf{1} \end{pmatrix} \triangleright \begin{pmatrix} \mathbf{1} \mathbf{1} & \circ \\ & \triangleright \\ & \mathbf{1} \mathbf{1} & \circ \end{pmatrix} = \begin{array}{c} \circ & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & \triangleright \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} & \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \longrightarrow \circ \\ & \bigcirc \longrightarrow \mathbf{1} \longrightarrow \bullet \\ & \bigcirc \longrightarrow \bullet \bigcirc$$

Definition

An iposet is *gluing-parallel-symmetric* (*gps*) if it is empty or can be obtained from the elements:

- •
- 1
- 1 🕨
- 1 N 1
- 1 M 2 where 1 M 2 = $(s,[2],t):2 \rightarrow 2$ is the non-trivial symmetry on 2.

by finitely many applications of \triangleright and \otimes .

Examples of non GPS-iposets

Conjecture

Conjecture

A poset is $gps \iff$ it does not contain one the five forbidden structures

$$N = 0 \longrightarrow 0 \qquad M = 0 \longrightarrow 0 \qquad W = 0 \longrightarrow 0$$

$$3C = 0 \longrightarrow 0 \qquad LN = 0 \longrightarrow 0$$

Proposition

A poset is $gps \implies$ it does not contain one of the forbidden five as an induced substructure.

Main proof argument

NN, M, W, 3C, LN do not admit non-trivial gluing decompositions.

Work

Possible paths

• Study the interval representations of the forbidden five (Quentin)

Possible paths

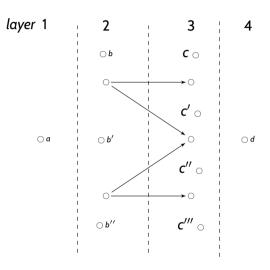

- Study the interval representations of the forbidden five (Quentin)
- Generate some posets based on some predicates and observe what we get when we try to add a new event

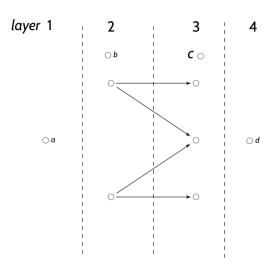

• We identified 3 basic structures on which we could be able to rely to generate posets.

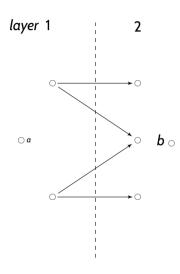

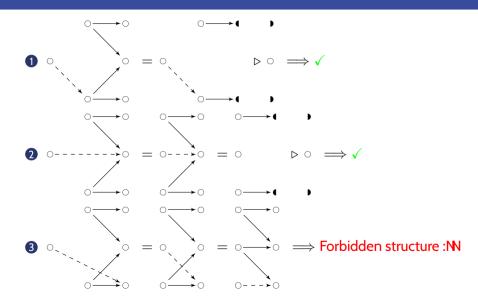

Definition

Let P be a poset. Let x, y be two points such that $x, y \in P$.

The zigzag distance $d_{zz}(x, y)$ is defined as the length n of a shortest zigzag x.

$$x = x_0 < x_2 > x_3 < ...x_n = y$$

• Let *P* be a poset which is not GPS.

- Let *P* be a poset which is not GPS.
- P is \otimes -indecomposable and \triangleright -indecomposable.

- Let *P* be a poset which is not GPS.
- P is \otimes -indecomposable and \triangleright -indecomposable.
- Let α be a right-extreme element.

- Let *P* be a poset which is not GPS.
- P is \otimes -indecomposable and \triangleright -indecomposable.
- Let α be a right-extreme element.
- Let *b* be a maximal element which is not right-extreme.

- Let *P* be a poset which is not GPS.
- P is \otimes -indecomposable and \triangleright -indecomposable.
- Let α be a right-extreme element.
- Let *b* be a maximal element which is not right-extreme.
- if $d_{zz}(a,b) > 2$, then $d_{zz}(a,b) \geqslant 4$

- Let *P* be a poset which is not GPS.
- P is \otimes -indecomposable and \triangleright -indecomposable.
- Let α be a right-extreme element.
- Let *b* be a maximal element which is not right-extreme.
- if $d_{zz}(a,b)>$ 2, then $d_{zz}(a,b)\geqslant 4$
- because of maximality *P* contains an induced *W*.

- Let *P* be a poset which is not GPS.
- P is \otimes -indecomposable and \triangleright -indecomposable.
- Let α be a right-extreme element.
- Let *b* be a maximal element which is not right-extreme.
- if $d_{zz}(a,b) > 2$, then $d_{zz}(a,b) \geqslant 4$
- because of maximality *P* contains an induced *W*.
- if $d_{zz}(a,b) \leqslant 2$, then $d_{zz}(a,b) = 2$, hencethereisz $\in P_{min}$ for which a > z < b.

- Let *P* be a poset which is not GPS.
