ELS 2016 – Lightning Talk

Make format customizable / extensible

FoCus

Didier Verna

- Declt has a lot of this:

```
(format t "~A" (escape str))
```

- I would like a custom directive:

```
(format t "~\'" str)
```

- But all I can do is this:

```
(format t  
  "~/net.didierverna.declt::escape/"  
  str)
```

FoCus: format customizations

FoCus

Didier Verna

- Wrapper around standard `format[ter]`
- Fully programmable case-sensitive directives
- *format-table*: similar to readtables
- Optional compile-time behavior
- Provides `in-format-table`
- Requires `asdf-flv`

Get it
