Presentation of TC-9

Assistants 2009

May 6, 2014

Presentation of TC-9

Overview of the tarball

The tree structure of TC-9

- New directory:
  - '`src/regalloc`': Where you will work. Color the interference graph, remove useless moves once the register allocation performed, and allocate the registers for fragments.

The tree structure of TC-9

- New directory:
  - '`src/regalloc`': Where you will work. Color the interference graph, remove useless moves once the register allocation performed, and allocate the registers for fragments.

Register allocation

Register allocation

- Color the interference graph.
- It is an Np problem.
- Use work lists for efficiency.
  - The simplify work list: list of low-degree non-move-related nodes.
  - The freeze work list: list of low-degree move-related nodes.
  - The spill work list: list of high-degree nodes.
  - The work list moves: list of moves enabled for possible coalescing.
