Analogies

Morphological
Functional
GeneTeX Material

Infection

Methods
Types

Cures

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

■ Classes

- ▶ *Curve*, QCM

■ Styles

- ▶ *Fixme*, *FiNK*, QCM, DoX, LstBlocks (soon)

■ Documents!

- ▶ Paradoxical situation: “If it ain’t broke, then fix it”

The birth of a baby document

Curative Infections

Conclusion

- **Original genome** \iff **document class**
 - **Viruses** \iff **styles**
 - ▶ Contribute some geneT_EX material
 - ▶ Need to infect a host
 - ▶ Relatively small compared to their host
- TEXLive 2009:
- 2462 styles, 327 LoC (av.)
 - *mamastyle*: texshade (14470 LoC)
 - *mimistyle*: xq (24535 LoC)

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

■ Exogenic

- ▶ Majority of viral infections
- ▶ `\usepackage` in a document

■ Endogenic

- ▶ 5 – 8% of our own genetic pool (retro-viruses)
- ▶ `\RequirePackage` in a class
- ▶ T_EXLive 2009: 95% classes have 4 (av.) endogenic infections

■ Endosymbiosis

- ▶ *e.g.* mitochondria \leftarrow former prokaryotes
- ▶ L^AT_EX needs more! (DoX \neq Doc, key/value processing)

■ Stylophages

- ▶ Style / style infection via `\RequirePackage`
 - T_EXLive 2009: 45% styles infected by 2 (av.) styles
- ▶ *Virophage* (Raoult 2008): infects the Mimivirus

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

■ Prostyles

- ▶ GeneTeX material incorporated into the host's
- ▶ Wide range of effects
- ▶ *e.g.* *F_iNK* (`\InputIfFileExists`), `Hyperref`
- ▶ `\let\@ldfoo\foo\def\foo{... \@ldfoo ...}`
`\renewcommand` *etc.*

■ Satellites

- ▶ Delta virus (HDV) over HBV
- ▶ DoX, Graphicx *etc.*

■ Host-dependent

- ▶ Rely on the host instead of another virus
- ▶ *e.g.* Beamer themes

■ Cheaters

- ▶ Competition instead of cooperation
- ▶ *e.g.* *Umbravirus* steals coat protein from *Luteovirus*
- ▶ LstBlocks (steals from Verbatim)

■ Handling viral infections

- ▶ Prevention
- ▶ Vaccines
- ▶ Anti-viral agents

■ Prevention in the \LaTeX biotope

- ▶ *by documentation*
- ▶ FiXme: officially supports standard classes and KOMA
- ▶ Hyperref's README file

*There are too many problems with varioref.
Nobody has time to sort them out. Therefore
this package is now unsupported.*

Adaptive Immune Systems I

Classes,
Styles,
Conflicts

Didier Verna

Analogies

Morphological
Functional
GeneTeX Material

Infection

Methods
Types

Cures

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

■ Adaptive Immunity

- ▶ Acquisition of defenses against a pathogen
- ▶ **Immunological memory:**
history of previously encountered infections
- ▶ **Active immunological memory:** long-term
 - Naturally acquired: mumps, measles *etc.*
 - Artificially acquired: vaccines

■ Adaptive immunity in the $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ biotope

- ▶ Scenario

- 1 Class C + style S \implies bug
- 2 Bug report
- 3 New version of class C or style S

Adaptive Immune Systems II

Classes,
Styles,
Conflicts

Didier Verna

Analogies

Morphological
Functional
GeneTeX Material

Infection

Methods
Types

Cures

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

■ New version of C

- ▶ Acquired immunity
- ▶ `\@ifpackageloaded`
- ▶ T_EXLive 2009
 - 13% classes have an active immune system against 2 (av.) styles

■ New version of S

- ▶ *viral tropism*
- ▶ `\@ifclassloaded`
- ▶ FiXme: tropism of 8 classes
- ▶ Note: no `\@ifpackageloaded` \implies “isotropic style”

Antiviral Agents

Classes,
Styles,
Conflicts

Didier Verna

Analogies

Morphological
Functional
GeneTeX Material

Infection

Methods
Types

Cures

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

■ In biology

- ▶ Molecules targeted towards specific infections
- ▶ Organism not prepared in advance
- ▶ No immunological memory

■ In L^AT_EX (anti-style agents)

- ▶ Section 6 of the Hyperref manual!

```
\makeatletter
\let\saved@bibitem\@bibitem
\makeatother
%% And then later:
\begin{verbatim}
\begingroup
\makeatletter
\let\@bibitem\saved@bibitem
\nobibliography{database}
\endgroup
```

Curative Infections

Classes,
Styles,
Conflicts

Didier Verna

Analogies

Morphological
Functional
GeneTeX Material

Infection

Methods
Types

Cures

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

- `\@ifpackageloaded from styles`
 - ▶ T_EXLive 2009: 8% styles
 - ▶ Minitoc: aware of 30 other packages
 - ▶ LstBlocks: curative style
- **Anti-viral viruses ?**
 - ▶ Mice: natural protection against *Friend*
 - ▶ Gene *Fv1*
 - ▶ 1992: endogenic retro-viral origin

Conclusion (?)

Classes,
Styles,
Conflicts

Didier Verna

Analogies

Morphological
Functional
GeneTeX Material

Infection

Methods
Types

Cures

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

- Drawing bridges between unrelated domains
 - *Behavioral* patterns (Cf. Design Patterns)
 - Probably only scratched the surface
 - Beyond L^AT_EX: M4, Lisp . . .
- ▶ Too much intercession \implies things are *out of control*

Questions ?

Please don't ;-)

Vaccines
Anti-viral Agents
Curative Infections

Conclusion

■ The first oncogenic style ever:

- ▶ Recently discovered in the ventilation system of the Sir Francis Drake Hotel
- ▶ First strain

```
\ProvidesPackage{oncogenic}[2010/06/28 v1.0 TUG Virus]  
\expandafter\let%  
  \csname ver@oncogenic.sty\endcsname\relax  
\RequirePackage{oncogenic}
```

- ▶ Second strain (after mutation)

```
\ProvidesPackage{oncogenic}[2010/06/29 v2.0 TUG Virus]  
\def\@ifl@aded#1#2{\expandafter\@secondoftwo}  
\RequirePackage{oncogenic}
```
